

STUDENT MANAGEMENT SYSTEM (SMS)

Description: An aristocrat approach of demonstrating the collaboration among two separate technologies viz. Asp.net with c-sharp and Android using cross technology parsers such as Simple Object Access Protocol through web services. Project demonstrates the same by a data aware asp.net web pages' project with services developed in c sharp and android app using simple object access protocol for full duplex data transmission pertaining to student information such as attendance, results and much more.

Scope: Information updated by Faculty which will Provide student attendance, result, profile-details, and much more to parents easily from our application.

Future-Enhancement: Improvise security by using encryption techniques.
Add more features and functionality.
User feedback, and much more.
